

TANISHKA SINGH

India · tanishkasingh2004@gmail.com · <https://tanishkasingh.vercel.app/>

EDUCATION

Poornima College of Engineering

Bachelor of Technology Computer Science GPA: 9

India

Sept 2021 - May 2025

WORK EXPERIENCE

RoboMQ

Associate, Software Engineer

India

Jan 2025 - Present

- Product Link: <https://hire2retire.robomq.io/>
- Led security hardening for ADP Marketplace (GSO) readiness, resolving SQL Injection, XSS, and CSRF vulnerabilities across modules using parameterized queries, DOMPurify sanitization, and updated cookie policies; utilized tools like Semgrep, OWASP ZAP, SQLMap, Burp Suite, and SonarQube, and partnered with Platform Engineering to drive centralized security practices.
- Integrated external systems using Node.js, Express.js, and REST APIs across Integration Hub, Access Manager, Paycom, BambooHR, Freshservice, Jira Service Management, SolarWinds, and ServiceNow modules, including webhook validation with ngrok and API mocking via Postman.
- Built dynamic configuration and approval interfaces using Angular, implementing conditional attribute mapping (dropdown & textarea with AND/OR logic), SIP support in proxyAddresses, Excel function extensions (Workday, Workday.intl, NetworkDays), and Custom Security Attribute rendering.
- Designed MySQL schemas and implemented identity provisioning workflows using Microsoft Graph API and Azure Portal to enable Shared Mailbox delegation, OneDrive access, and Custom Security Attributes integration within lifecycle workflows.
- Engineered workflows within the ServiceNow portal by creating custom tables, approval and email workflows, configuring REST steps for external API calls, implementing subflows, managing connections and credential aliases, leveraging Table API for automated integrations, customizing UI via Form Designer, UI Macros, and Formatters, enforcing access controls, publishing applications across instances, testing integrations using ngrok, and building record-based widgets to support certification readiness and interoperability.
- Actively handled production issues and release cycles; built and deployed services using Jenkins CI/CD pipelines, and debugged distributed environments via Kubernetes logs.

SKILLS

Programming Languages:	JavaScript/TypeScript, HTML/CSS
Libraries & Frameworks:	ReactJS, AngularJS, ExpressJS, NodeJS, Mongoose
Database:	PostgreSQL/MySQL, MongoDB
Version Control Tools:	Git/GitHub
Platforms:	Windows, Linux

OPEN SOURCE CONTRIBUTIONS

servo/servo <https://github.com/servo/servo/pulls?q=is%3Apr+author%3Ataniishkaaa>
Resolved Clippy lint warnings, refactored `CanGc::note()` calls to improve garbage collection safety, eliminated GC borrow hazards by restructuring mutable borrows for better memory management, and contributed to CSS layout improvements enhancing overall code quality and stability.

systemd/systemd <https://github.com/systemd/systemd/pulls?q=is%3Apr+author%3Ataniishkaaa>
Resolved hardware database configuration issues and added a unit test for a function in `env-util.c` (src/basic) to improve reliability and code coverage.

nodejs/node <https://github.com/nodejs/node/pull/53873>
Updated Node.js documentation on dual-package hazards by recommending `node/default` conditions instead of `require/import`

Nixtla/statsforecast <https://github.com/Nixtla/statsforecast/pulls?q=is%3Apr+author%3Ataniishkaaa>
Updated documentation to reflect the deprecation of ETS in favor of AutoETS and resolved a RuntimeWarning by correcting incompatible data type usage in array operations to improve code stability and clarity.

PERSONAL PROJECTS

Book-Blog

A book-review website made in MERN stack.
